Creating the Future of Water
VICS brings you new challenges for sustainable water business

WHAT'RE YOUR CONCERNS?

Once we tried to reduce operation cost, but I want to squeeze it more....

We want to upgrade the facility, but we don't know how to study and propose to our manager.

We are not sure whether the current plant operation is good comparing with the other plants.....

We understand the value of human resources, but we do not have training course for our engineers.....

I want to hire a consultant but we can't afford it.....

It could be very helpful, if we've got an expert's second opinion anytime.....

It's all solved by VICS !

Nihon Suido Consultants Co., Ltd.
Water and Environmental Consultants

Virtual In-house Consultant Service (VICS) Outline

01 Subscription service

VICS is on-line, subscription consulting service by KAIZEN approach. KAIZEN (Japanese word) is continuous business improvement activity which led to the innovation and the economic development in Japan. It is not top-down order but seeking for better outcomes based on accumulated daily staff's efforts. We will think together, work together and enjoy the outcomes together. We will provide you knowledge and know-how on running water supply / wastewater treatment plants and their business.

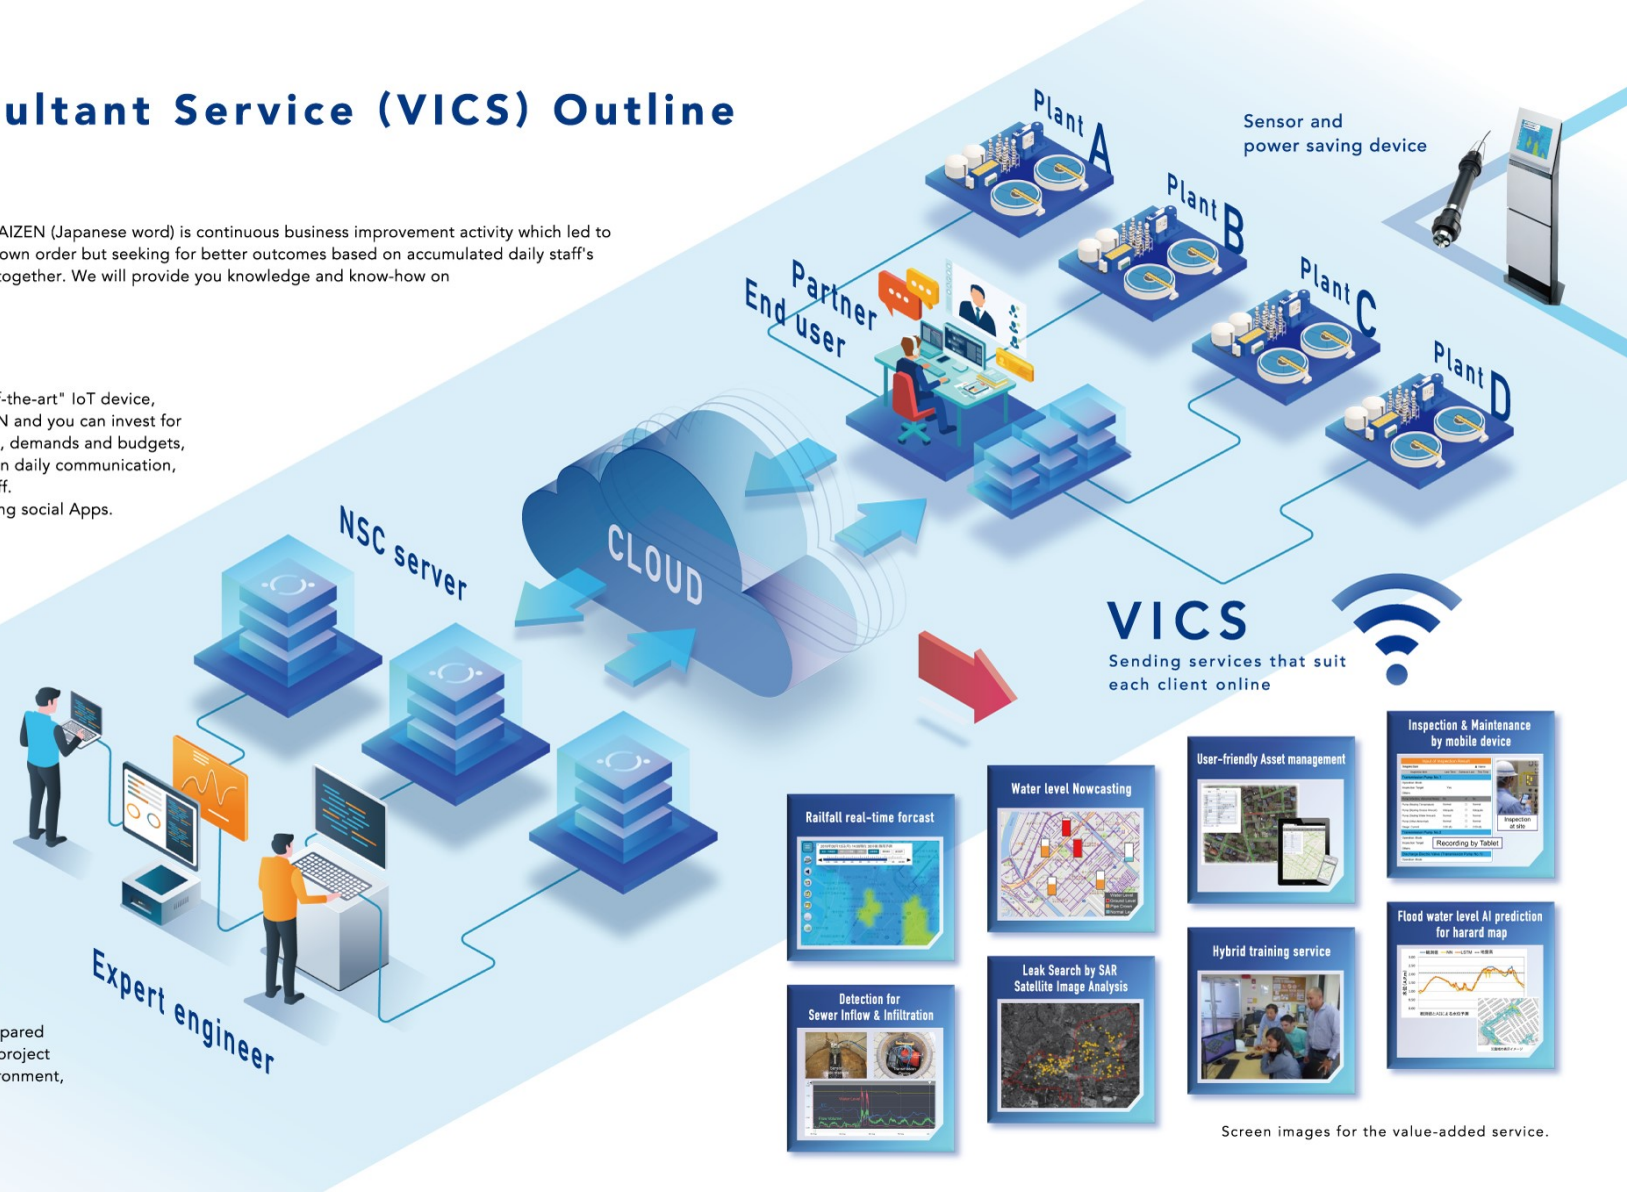

02 Remote monitoring

At the starting point of VICS, neither huge investment nor "the state-of-the-art" IoT device, data Cloud service is necessary. Because these are just tools for KAIZEN and you can invest for it later after you could save the cost. Depending on your current assets, demands and budgets, we will propose you to acquire the good result with minimum cost. Even daily communication, you do not need to install any new Apps which may burden to your staff. We will follow your preferable and convenience manner from the existing social Apps. That's the reason why you can start VICS with affordable price.

03 Value-added service

The value-added service is to solve your specific technical issues and innovate your work efficiency directly with our direct technical services. The professionals will appear on site and verified equipment / system / analysis would be deployed.

Or specific planning and designing works are to be carried out and prepared for technical reports. You can choose the required fields of engineers (project manager, process, civil structure, architect, mechanical, electrical, environment, finance...), the work location (remote, on-site), and the work duration. We will cater to your needs.
